

ABOUT

Aluminium Floor Bunding

Aluminium Floor Bunding is a heavy-duty solution for hazardous liquid containment, engineered in line with Australian Standard AS 1940-2004. It safely contains and diverts liquids such as acids, fuels, corrosives, coolants, and water, protecting workplaces and the environment from contamination risks.

Constructed from marine-grade 6005-T65 extruded aluminium, this bunding is built to withstand continuous heavy traffic, including Class 2 RAV B-Doubles and container forklifts. It offers a long-lasting alternative to other bunding materials such as PVC and rubber, providing superior durability in high-traffic or high-impact areas. Aluminium Floor Bunding features a 30mm height and a grooved, non-slip profile, it balances effective containment with safe and easy vehicle access.

Aluminium Floor Bunding is non-magnetic and non-sparking, making it ideal for hazardous storage areas where explosive vapour mixtures may be present. Each predrilled section is supplied with concrete anchors for ease of installation. The use of one cartridge Fulaprene sealant per two lengths of aluminium floor bunding is recommended to create an impermeable liquid barrier.

FEATURES

- Compliant with AS 1940-2004 hazardous liquid storage.
- Marine-grade 6005-T65 extruded aluminium construction.
- Excellent chemical resistance.
- Extreme heavy duty - safe for heavy vehicles and tracked machinery.
- Rigid bund that won't chip, crack or degrade over time.
- Create a custom size banded storage area.
- 30mm height and grooved surface for improved traction and safe vehicle passage.
- Easy to install with supplied concrete anchors.
- Recommended installation with Fulaprene adhesive (ACC9013, sold separately).

APPLICATIONS

- Warehouse and workshop hazardous goods storage.
- Fuel, chemical, and coolant storage areas.
- Spill containment in manufacturing or processing facilities.
- Facilities and warehouses requiring heavy vehicle access.
- Hazardous environments with risk of explosive vapour mixtures.
