

ABOUT

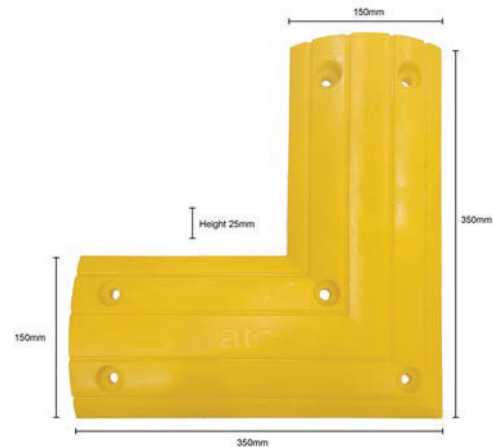

Megabund Floor Bunding

MegaBund Floor Bunding is a premium polyurethane extruded floor bunding for the safe containment of hazardous liquids. With excellent chemical resistance, MegaBund is a versatile chemical storage solution which can be used in a range of different applications.

Flexible and low profile, this highly visible floor bunding is designed to reduce trip hazards and improve workplace safety, while being easily traversable by vehicles and forklifts. Stay compliant with Australian Standards such as AS/NZS 3833:2007 and avoid EPA fines. The floor bunding can be cut into desired lengths to create a custom sized storage area, reducing cost and wastage.

MegaBund is easy and stress free to install; it is manufactured with pre-moulded points for dynabolts and only basic tools are required. 10 Dynabolts are included in the purchase of each floor bunding length. When purchasing tubes of Multibond SMX50 Adhesive, we recommend using approximately 1 tube of adhesive to 3 lengths of Megabund.

- Premium polyurethane extruded floor bunding with excellent resistance against acids, alkalis, fuels and oils.
- Heavy duty rigid floor bunding, suitable for high traffic areas including heavy vehicles and machinery.
- Low profile design is easily traversable by forklifts and vehicles.
- Available with corner units to complete the bunded area.
