

ABOUT

PVC Foam Floor Bunding

Stratex PVC Floor Bunding is a flexible and economical way of bunding areas that contain a large volume of hazardous liquids. Very simple to install, it creates an effective storage area while still allowing easy access within by personnel and vehicles. This system works well for many indoor situations that require the liquids held there to be bundled according to current legislation.

This includes chemical stores, oil depots logistics warehousing, workshop facilities, and wash-down areas. The high density foam encased with chemical resistant PVC returns to its original shape immediately after being driven over. Simple to install with either/both contact adhesive or alloy strips & concrete screws.

- Heavy Duty 900gsm PVC provides strong chemical resistance and durability.
- 5 year UV rating.
- A flexible and economical way of bunding areas that contain a large volume of hazardous liquids.
- Very simple to install, it creates an effective storage area while still allowing easy access within by personnel and vehicles.
- This system works well for many indoor situations that require the liquids stored to be bundled according to current legislation.
