

ABOUT

Weighted Drain Cover

Weighted Drain Covers are a simple, quick to deploy and effective method for temporarily sealing a stormwater drain in the event of a spill. They are an economical solution for your stormwater management plan. Blocking the drain will allow time for spill clean-up while preventing stormwater contamination. The Weighted Drain Cover comes with a storage bag that can be attached to a wall or similar to ensure it is readily available to deploy in seconds. Made using a robust PVC, the geo-textile underlay ensures a better seal on rough surfaces. The gel filling allows flexibility so the drain cover conforms to almost any gutter or flooring surface while allowing the edges to sit firmly over the grate and drain surrounds.

KEY FEATURES

- Simple, quick to deploy and effective method for temporarily sealing a stormwater drain in the event of a spill
- Economical solution for your stormwater management plan
- Blocking the drain will allow time for spill clean up while preventing stormwater contamination.

SPECIFICATIONS

- Heavy duty 900gsm PVC
- UV stabilised for up to 5 years
- 260gsm non woven geotextile underlay
- Gel filled perimeter
- 4 x handles
- Carry bag included
