

ABOUT

The Ultimate In Drain Protection

Protecting drains from silt and sediment is an ongoing challenge for any worksite. What if there was a solution that prevented flooding whilst trapping silt and hydrocarbons?

Thankfully, a solution does exist and its taking the Civil Construction industry by storm - Introducing the GuardDog drain filter.

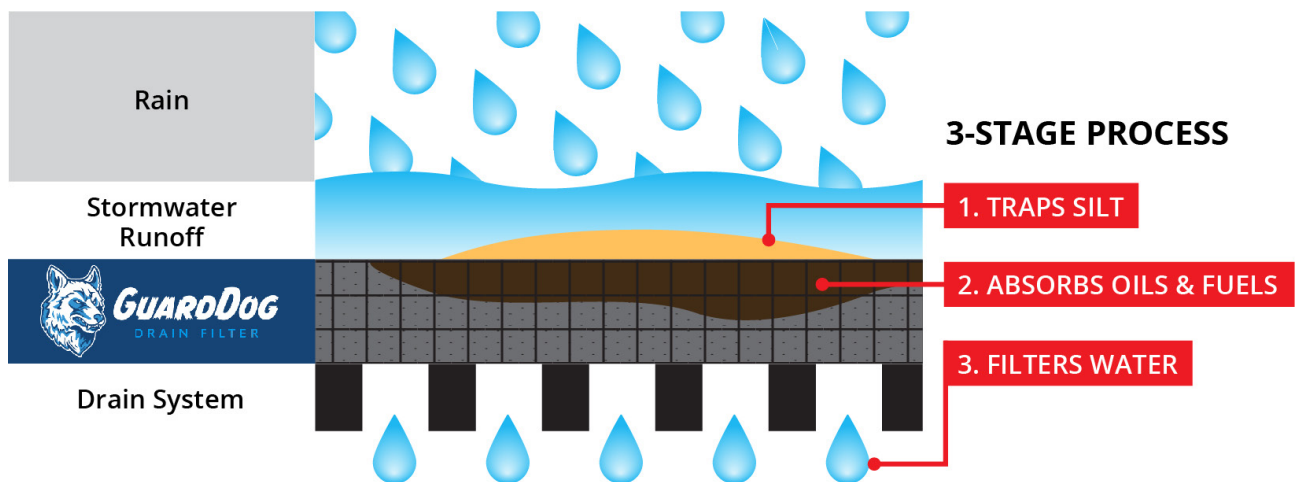

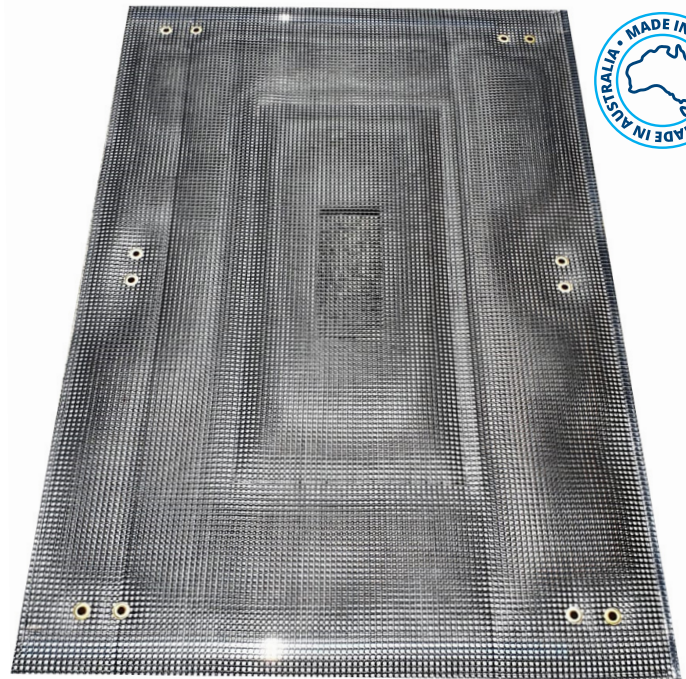

A Tough & Effective Drain Filter

The GuardDog features Spilltration Husky absorbent filtration media. Made from 100% recycled post-consumer waste, these absorbents effectively trap hydrocarbons, silt, sediment (minimum particle size filtration 53 microns - .53mm). What's more, this drain filter can absorb up to 10 litres of hydrocarbons, releasing only clean water. It's made using heavy duty plastic mesh, capable of being driven over by heavy trucks and machinery. Unlike coir logs and silt socks, the GuardDog will not split when compressed.

The GuardDog is the only line of defence you'll need for your worksite, protecting waterways as contaminated stormwater passes through it. Paint, diesel, sand, concrete - nothing will get past the GuardDog.

DRAIN FILTER

TO ORDER

Code	Description	Size	Order Qty
SPL090A	GuardDog Side-Entry Drain Filter	1220 x 810mm	Each
SPL091A	GuardDog Side-Entry Drain Filter	1500 x 810mm	Each
SPL091A-HF	GuardDog Side-Entry Drain Filter - Hi Flow	1500 x 810mm	Each
SPL098A	GuardDog Standard Drain Filter	1000 x 810mm	Each

GUARDDOG

DRAIN FILTER

Low Maintenance, Easy Install

Install the GuardDog to drain and gutter systems in minutes via either:

1. **Concrete screws or DynaBolts** - Drill holes and secure the Guard Dog in place. Use washers above the eyelets for added security.
2. **Metal or cable ties** - Thread through drainage grates and eyelets to secure.

If easy drain access is required, the Guard Dog can also be gutter mounted with bolts or ties on one side, and secured with a sandbag on the other.

Side-entry GuardDogs feature aluminium strips for a perfect fit on side drainage systems - simply mould to the gutter contour and then mount in place. Cleaning the GuardDog is easy too, just brush away any leaves or debris that builds up during use. Also can be reused for other work sites.

Contours to gutters for a perfect fit

A Custom Fit, with Sizing to Suit You

GuardDog drain filters are available in a variety of sizes to suit most standard and side entry drains, with a cut outs for extreme flooding (available without by request). Of course not every drain is the same, so custom GuardDogs are also available to suit your requirements. They're made right here in Australia, so you can get a GuardDog onsite quickly to protect your drains and waterways.

DO YOUR DRAINS NEED PROTECTION?

Protecting side entry drains from sediment, silt and oil can be challenging for any worksite.

DON'T DO THIS

Coir logs and sandbags can offer some protection, but this setup can easily be compromised.

GUARDDOG IS THE ANSWER

GuardDog Drain Filters can be installed in minutes to stop sediment, silt and oil from entering waterways.
