

**ABOUT**

## Chemical Absorbent Pads

Chemical absorbents are designed to contain and absorb hazardous liquids such as acids, caustics, oils, coolants, solvents and other solutions. They are fast acting with high absorbency rates, ideal for use in laboratories, hospitals and chemical storage areas.

Absorbent pads are ideal for the clean up and maintenance of leaks, drips and spills. They can be used on sealed and unsealed surfaces and are available in two thicknesses depending on application.

Heavyweight pads are suitable for absorbing large pools of liquid. Each heavyweight pad can absorb up to one litre.

Standard pads offer excellent versatility and less wastage when used for smaller spills.

**BENEFITS**

- Bonded to provide maximum strength
- Premium quality and fast absorbing
- Non-allergenic, non-hazardous with no dust
- Simple to use without the need for specialised PPE

**APPLICATIONS**

- Mining
- Construction
- Heavy Machinery
- Workshops
- Maintenance
- Aviation
- Chemical
- Laboratories
- Marine

**TO ORDER**

Code	Description	GSM	Width	Length	UOM
