

ABOUT

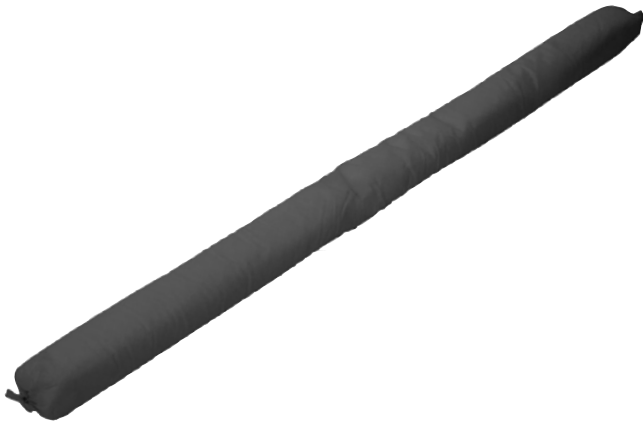

## General Purpose Absorbent Socks

General purpose absorbents are grey in colour and rapidly soak up all types of liquid spills, including non-hazardous, water based, hydrocarbons (including oil & fuel) as well as most chemicals. Available in pads, rolls, adhesive matting, drum toppers, socks and cushions.

Absorbent socks are designed to encircle spills for clean up or to protect areas from the path of spills. They absorb liquid spills quickly and stop them from spreading further.

Once absorbent socks have contained the spill, absorbent pads or granules can be used to soak up the pooled liquid.

- Features ultra-absorbent and fast-acting filling which retains absorbed fluid
- General purpose absorbents are suitable for most types of liquid spills, including water-based chemicals and hydrocarbons
- Ideal for use on sealed surfaces as a barrier and to prevent pooled liquid spreading
