

ABOUT

Bilge Boom

The Bilge Boom is a solution designed to absorb hydrocarbons on water in confined spaces. It is made from heavy duty shade cloth and features an in-built anchoring rope so it can be lowered, secured and retrieved easily. The Bilge Boom will remain buoyant even when fully saturated. The Bilge Boom can absorb all types of hydrocarbons, including oil, fuel, hydraulic fluids and solvents. It is hydrophobic and will not absorb water based liquids.

The Bilge Boom is ideal for absorbing unwanted oils, fuels and solvents in bilges, sumps, and tanks. It can also be used in drain pollution guards to capture hydrocarbons.

FEATURES

- Highly absorbent polypropylene designed for hydrocarbons.
- Hydrophobic properties means it will float on water, even when fully saturated.
- Effective and simple to use.
