

ABOUT

Absorbent Roll - Oil & Fuel

Stratex Absorbent Rolls are ideal for use in any industrial setting. Our Oil & Fuel Standard Rolls are specially designed to provide extra strength and durability, ensuring they won't come apart even when fully saturated with oil. These rolls will absorb hydrocarbons only and due to their hydrophobic properties can be used to absorb oil and fuel spills on water.

Constructed from premium-quality polypropylene material, these rolls provide maximum coverage and reducing the need for frequent replacements. Our rolls are conveniently perforated, allowing for easy separation according to usage whilst minimising waste.

With their super absorbent and super strong qualities, the Stratex Absorbent Rolls are a must-have for any workplace that deals with oil spills or leaks. Whether you're working in a factory, automotive shop, or any other industry that requires frequent cleanups, these rolls will help keep your workspace clean and safe.
